

Respected Hiring Team,

As a **Master of Science in Data Science** graduate from the University of New Haven, I am eager to apply for the **Data Scientist** role at Northeastern's Roux Institute. My background in both **Predictive and Generative AI** aligns perfectly with the AI Solutions Hub's mission to deliver industry-diverse solutions.

During my academic and professional tenure, I have developed a robust technical foundation:

- **Predictive AI:** Developed the **EDU Predict Tool**, a Power BI and ML-driven dashboard for enrollment forecasting, and conducted multivariate statistical modeling for healthcare risk analysis.
- **Generative AI:** Gained hands-on proficiency with **LangChain, LlamaIndex, and OpenAI APIs** to build intelligent, data-driven frameworks.
- **Engineering & Deployment:** Experienced in **SQL query optimization**, Agile methodologies, and version control via **GitHub** to ensure efficient model delivery.

I am committed to **ethical AI practices** and possess the "bias for action" required to thrive in a research-intensive environment. I look forward to the possibility of contributing to the innovative projects at the Experiential AI Institute.

Sincerely,

Chethan Chakradhar Mangala
